

CARBON MONOXIDE THE SILENT KILLER

STEPS TO KEEP YOUR HOUSEHOLD SAFE

CARBON
MONO ~~IDE~~
BE ALARMED!

Adele Forbes lost her son and grandparents to Carbon Monoxide in 2006, when she left him to enjoy a fun sleepover with his great-grandparents. She called to check up later in the evening, and nobody answered. When she went round to see what was going on, she discovered that all three had

been fatally poisoned. Adele can't express enough how important an audible Carbon Monoxide alarm is, and hopes her story will convince others to take action and protect themselves from Carbon Monoxide poisoning.

CARBON MONOXIDE – BE ALARMED!

Carbon Monoxide is a highly poisonous gas that has no colour, taste or smell. It can be produced by any appliances burning gas, wood, oil or coal. Poisoning by Carbon Monoxide can be fatal or cause lasting health damage. Early symptoms can include nausea, dizziness, tiredness and headaches.

There are still deaths each year from Carbon Monoxide poisoning. Some 15 million households in the UK are at risk of Carbon Monoxide poisoning because they do not have an audible alarm.

The six main symptoms of Carbon Monoxide poisoning are headaches, dizziness, nausea, breathlessness, collapse and loss of consciousness.

Jude Sellmeyer was training as a nurse when she woke up at 5am one morning feeling severely unwell. When she found her flatmate passed out on the floor she immediately suspected Carbon Monoxide poisoning, due to her medical experience. Jude was rushed, with her flatmate, to hospital where she was placed on intense 24/7 oxygen therapy. She says: "I'm extremely lucky to be alive today – it's only because I was awake for an

early shift that I was aware that I had been poisoned during the night. If I'd slept for an hour longer I wouldn't be here. It's so important that everyone gets an audible Carbon Monoxide alarm to protect them and their family. Get one today – tomorrow could be too late."

STEPS TO KEEP YOUR HOUSEHOLD SAFE

1. Fit an audible alarm

Audible Carbon Monoxide alarms can be bought from many DIY stores, supermarkets and energy

suppliers for around £20. If you are a tenant, your landlord may provide you with one. We do not recommend the use of 'Black Spot' indicators as these are often inaccurate and will not alert or wake you if Carbon Monoxide is present.

2. Service your appliances

Make sure all fuel-burning appliances are serviced annually by an engineer who is qualified and registered

with the appropriate organisation: Gas Safe Register (gas), HETAS (solid fuel) or OFTEC (oil). If you live in rented accommodation with gas appliances your landlord must provide you with proof that a registered engineer has serviced the gas appliances within the last 12 months.

3. Don't block ventilation

Make sure that vents, flues and chimneys aren't blocked. Chimneys should be swept at least once a year – or more often if used heavily.

4. Know the signs

The six main symptoms of Carbon Monoxide poisoning are headaches, dizziness, nausea,

breathlessness, collapse and loss of consciousness. A key indication that Carbon Monoxide may be the cause is if symptoms disappear or get better when you leave the home and come back when you return. Look out for sooting or staining on or around your appliance and for gas appliances burning with a lazy yellow or orange flame rather than a sharp blue one. Excessive condensation in the room where the appliance is installed is another sign.

IN AN EMERGENCY

IF YOUR ALARM GOES OFF OR YOU SPOT OTHER SIGNS OF CARBON MONOXIDE

- Open doors or windows for ventilation.

- Seek medical advice.

- Call the relevant emergency advice line:

Gas Emergency Service
(24 hours) 0800 111 999;
Solid Fuel Advice Line
0845 601 4406;
Oil (OFTEC) 0845 658 5080.

- Have all appliances serviced and checked by a registered engineer. Do not use them until you're told it's safe to do so.

IF YOU FEEL UNWELL

- Go to your GP, call NHS 24 on 08454 242424 or, if it is urgent, call 999 for an ambulance.

Carbon Monoxide – Be Alarmed! is the national campaign to reduce the number of deaths and injuries caused by Carbon Monoxide.

There are a number of charities campaigning on Carbon Monoxide issues and supporting victims, including the Dominic Rodgers Trust and CO Awareness.

For more information about how to stay safe please visit the campaign website:

www.co-bealarmed.co.uk

and follow @COBeAlarmed

This campaign is run by Energy UK on behalf of Britain's six major gas and electricity companies in partnership with the Dominic Rodgers Trust, and is supported by more than 40 other organisations
